The initial meet up was on Friday, March 24th. We set up the github repo and designed the controller overlay. Then from March 25th to 31th, we meet up everyday and worked on the code together. We followed a natural pattern of work, first task was to implement the look ability in Critter. After that we worked on the GUI, and implementing functionality there. Most of the code was written together, and debugging was done in the same manner.
